

Mus Packaging

Mus Packaging has been a supplier of metal packaging and plastic closures since 1986. Our products have been used in the paint and chemicals market from the beginning, and today our regular customers also include companies from the cosmetics and food industries. With the Benelux as our home market, our company has developed over the years to become a modern, international company with a growing number of customers reaching far beyond Europe.

We have an above-average assortment of plastic closures and metal packaging products, with volumes ranging from 14 ml up to as large as 220 litres. We deliver packaging that is suitable for water-based products, two-component solutions and dangerous goods that require UN-approved packaging. The plastic closures can be used on cans as well as plastic packages such as bottles and jerry cans.

Metal... the packaging of the future

Metal is a fantastic packaging material for every link in the supply chain, from manufacturer to waste processing company. Some of the advantages of metal include:

- Excellent barrier properties (against dust, water, light, air and rust)
- Safe (unbreakable, tamper evident and tamper resistant)
- Most efficient on filling lines
- Complete preservation of nutritional value, even without refrigeration
- User-friendly
- Innovative and modern
- High quality printing techniques for permanent labelling
- 100% recyclable

Metal is a recycling champion. The empty package can simply be thrown in the waste bin. It is recovered from the waste flow by waste processing companies using magnets. It is the only packaging material that does not need to be collected separately, which makes it easy for the user to be environmentally responsible.

Metal can be recycled endlessly without any loss of quality. This makes it an ideal packaging material and it avoids waste. In the Netherlands, no less than 88% of all metal packaging is reused. In this way, metal packaging more than satisfies the Dutch 'Packaging Management Decree' (Besluit Beheer Verpakkingen). But it doesn't end there.

Cradle to Cradle

Our supplier has become the first company in the packaging industry to obtain the coveted Cradle to Cradle certification for two complex product groups – baby food and paint. This certificate is regarded as one of the most rigorous environmental labels in the world. The philosophy behind Cradle to Cradle is that products must be designed to be 100% recyclable or 100% biodegradable. Products must form a 'closed loop', meaning that the concept of waste

can be completely eliminated and residual products are used as new resources. The Cradle to Cradle certification was conducted by the leading environmental agency EPEA. This involved analysing every component of the baby food and paint cans at the deepest chemical level (to 100 ppm) for 9 months, and performing a strict evaluation of material input and reuse, energy consumption, water consumption and social responsibility.

Metal packaging

- Cylindrical cans (food and non-food)
- Conical cans
- Liquid cans
- Conical pails and hobbicks
- Aerosols
- Drums and barrels
- Putty cans

Plastic closures

- REL 24, 32, 42, 57
- DIN 24, 32, 42, 57, 69
- Closures for aerosols
- Closures for plastic cans
- Other closures

Different markets

A variety of shapes and sizes of cans are used in different markets. For instance, cans are perfect as safe packaging for all kinds of foodstuffs. Handy opening systems provide added value to the user.

Spray cans are not only user-friendly, they are also very hygienic. This makes them suitable for various markets such as industry, cosmetics and food.

The paint and chemicals market demands robust and reliable packaging that can be transported, used and stored easily. Cans are commonly used to meet this need because the characteristics of the material satisfy all these requirements.

Professional knowledge

Knowledgeable staff are a must for every company. Our sales team is made up of qualified packaging experts who can advise you on a range of issues regarding packaging your product. Furthermore, every employee is experienced in their field, whether it is logistics, technology or the product. And you benefit from this.

Fast delivery

Order today, get it tomorrow. We have been glad to make our customers happy with our service for years. Products that we have in stock can always be delivered within 24 hours. Combine this with the small minimum order quantities, and everyone can always operate flexibly.

Attractive numbers

What is a large order for one can be a small order for another. That is why you can order in different order quantities from us. We can deliver products in blister packs, on a Euro pallet or have them repackaged in boxes. Just the way you want it.

Warehousing

If you don't have enough warehouse space, you can leave your products in stock with us in the short or long term. We call this "dedicated stock", which is often used for decorated cans.

A special part of our service is that you can also store products other than your own with us. This could for example mean products that are also used in your industry. It's handy to have all it in one place.
